Introduce

This document describes the settings for an Internet connection via a hotspot of an iPhone.

iPhone as mobile hotspot

In order to connect a C6HMI / C6Router to the Internet, you must configure the iPhone as a mobile hotspot. This option can be found in the iPhone settings *(Einstellungen)* / personal hotspot *(Persönlicher Hotspot).*

Enable the personal hotspot *(Persönlicher Hotspot)* and use the proposed password *(WLAN-Kennwort)* to connect to the network with your laptop.
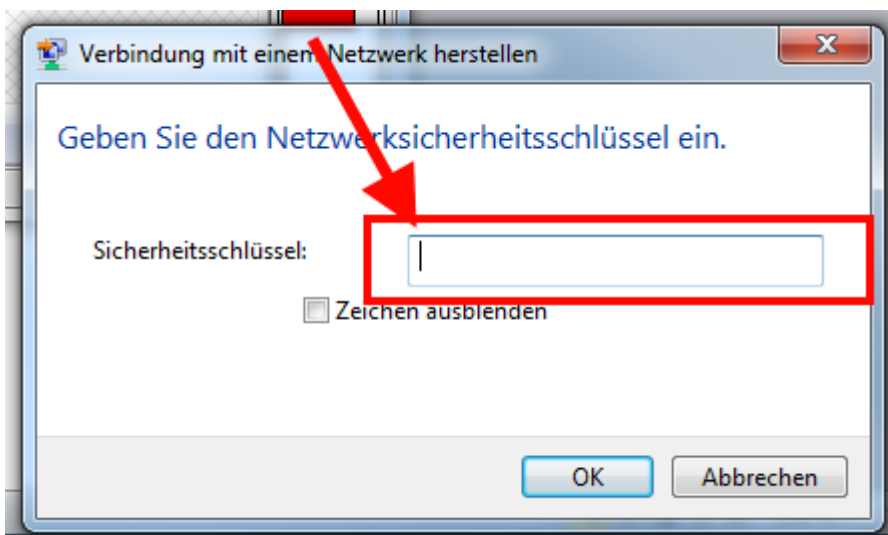

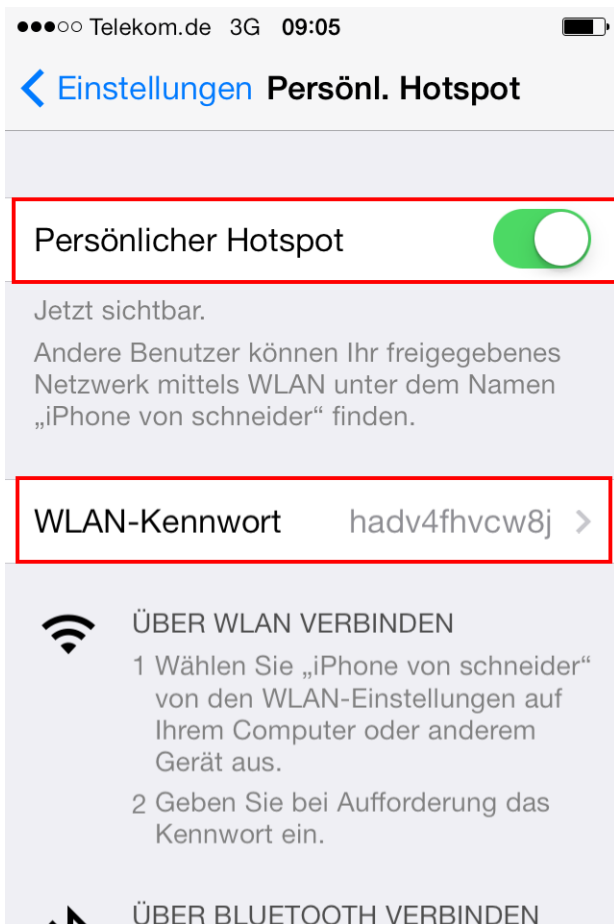

In order to pass through the network connection to the C6HMI or the C6Router, it must be enabled for further participants. At first you open the network and sharing center *(Netzwerk- und Freigabecenter)* after that change the adapter settings *(Adaptereinstellungen ändern)*.
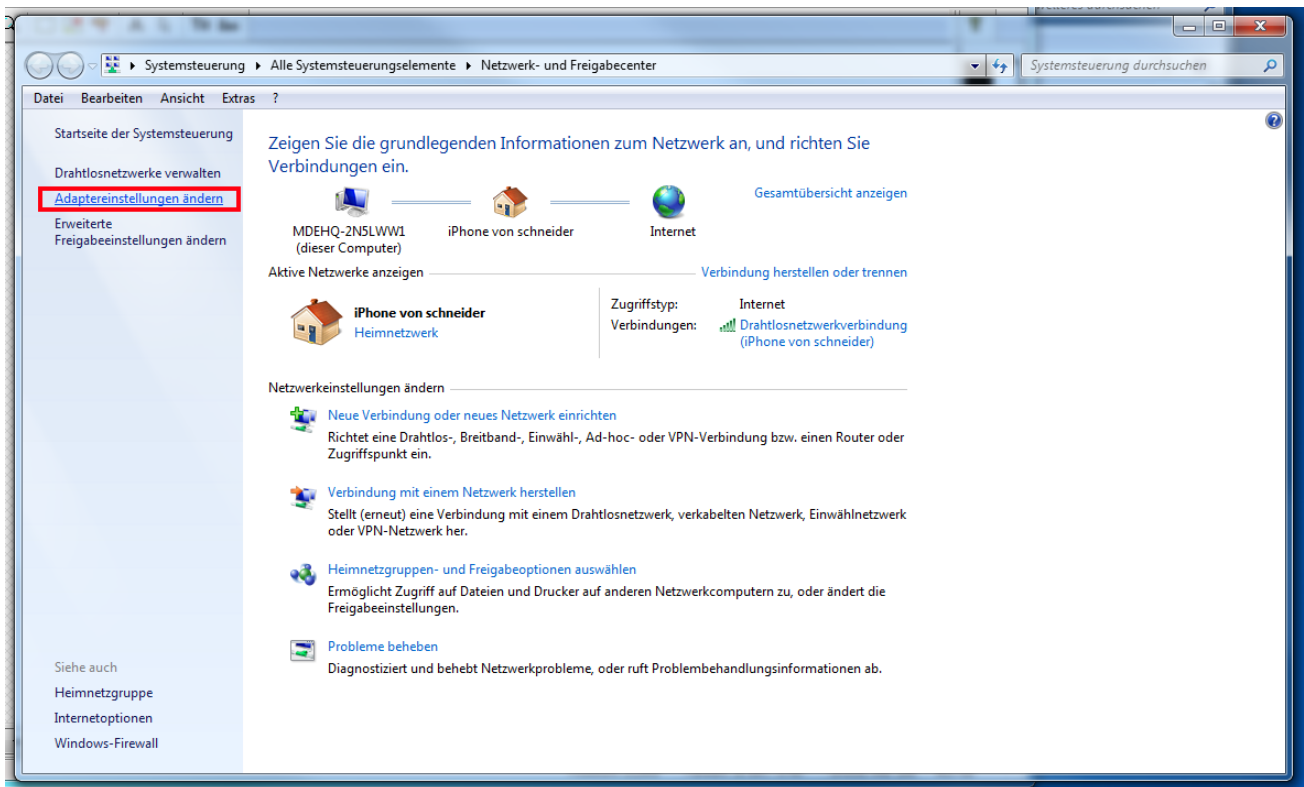

Here you will find a Wi-Fi network *(Drahtlosnetzwerkverbindung)* which is generated by the iPhone. In the settings *(Eigenschaften)* you have to adjust the sharing settings.
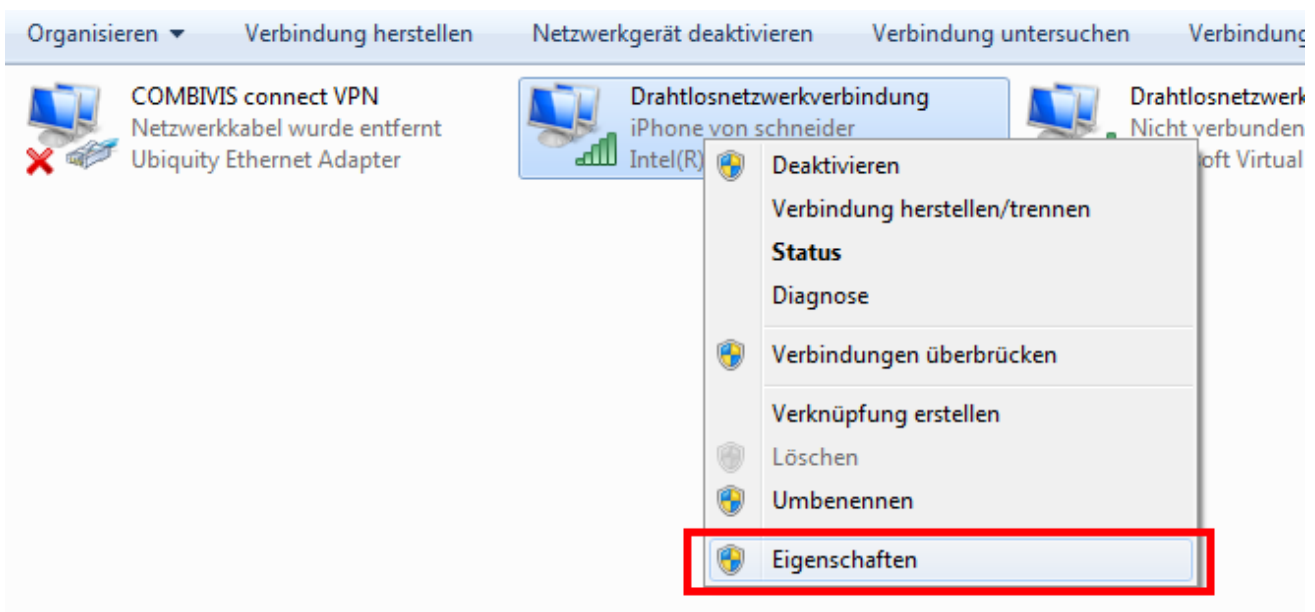

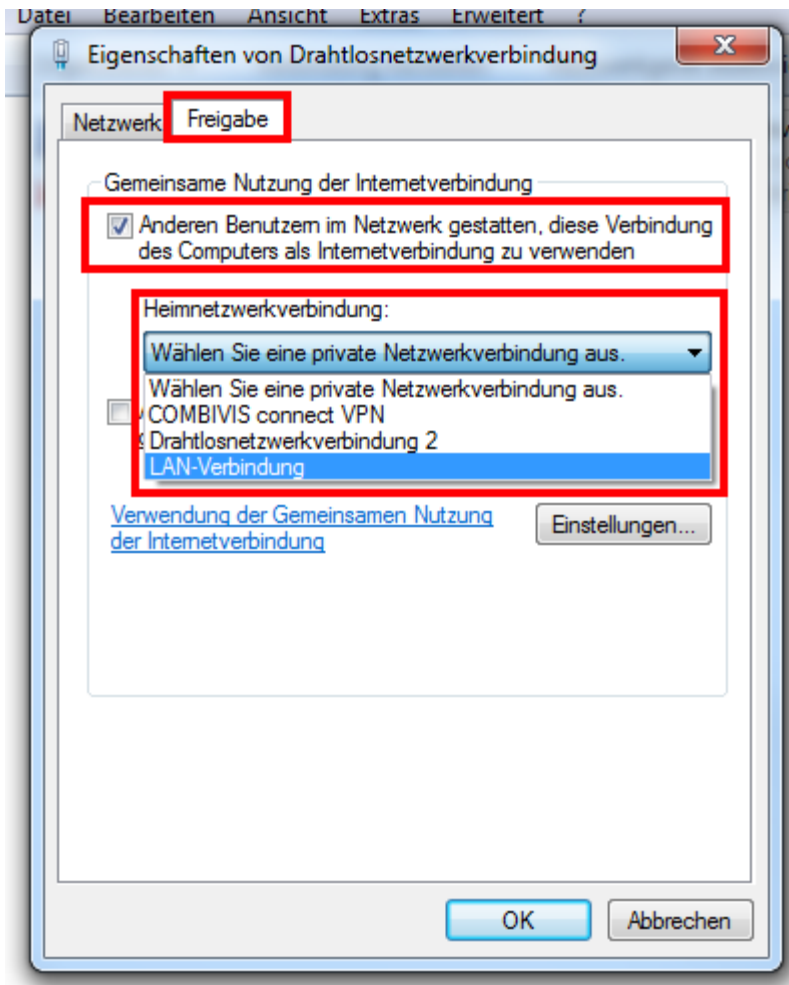

Now the network port of the C6HMI / C6Router is to be determined under the menu tab „Sharing" *(Freigabe).* Select the network port which is connected to your laptop.

An IP address is automatically assigned to the C6HMI / C6Router via your laptop / iPhone. Hint: Set the network port of the C6HMI or C6Router (WAN) to DHCP. The iPhone is used as Gateway.

Now the COMBIVIS connect Runtime can be connected to the COMBIVIS connect Domain.
