SYSTEM OVERVIEW

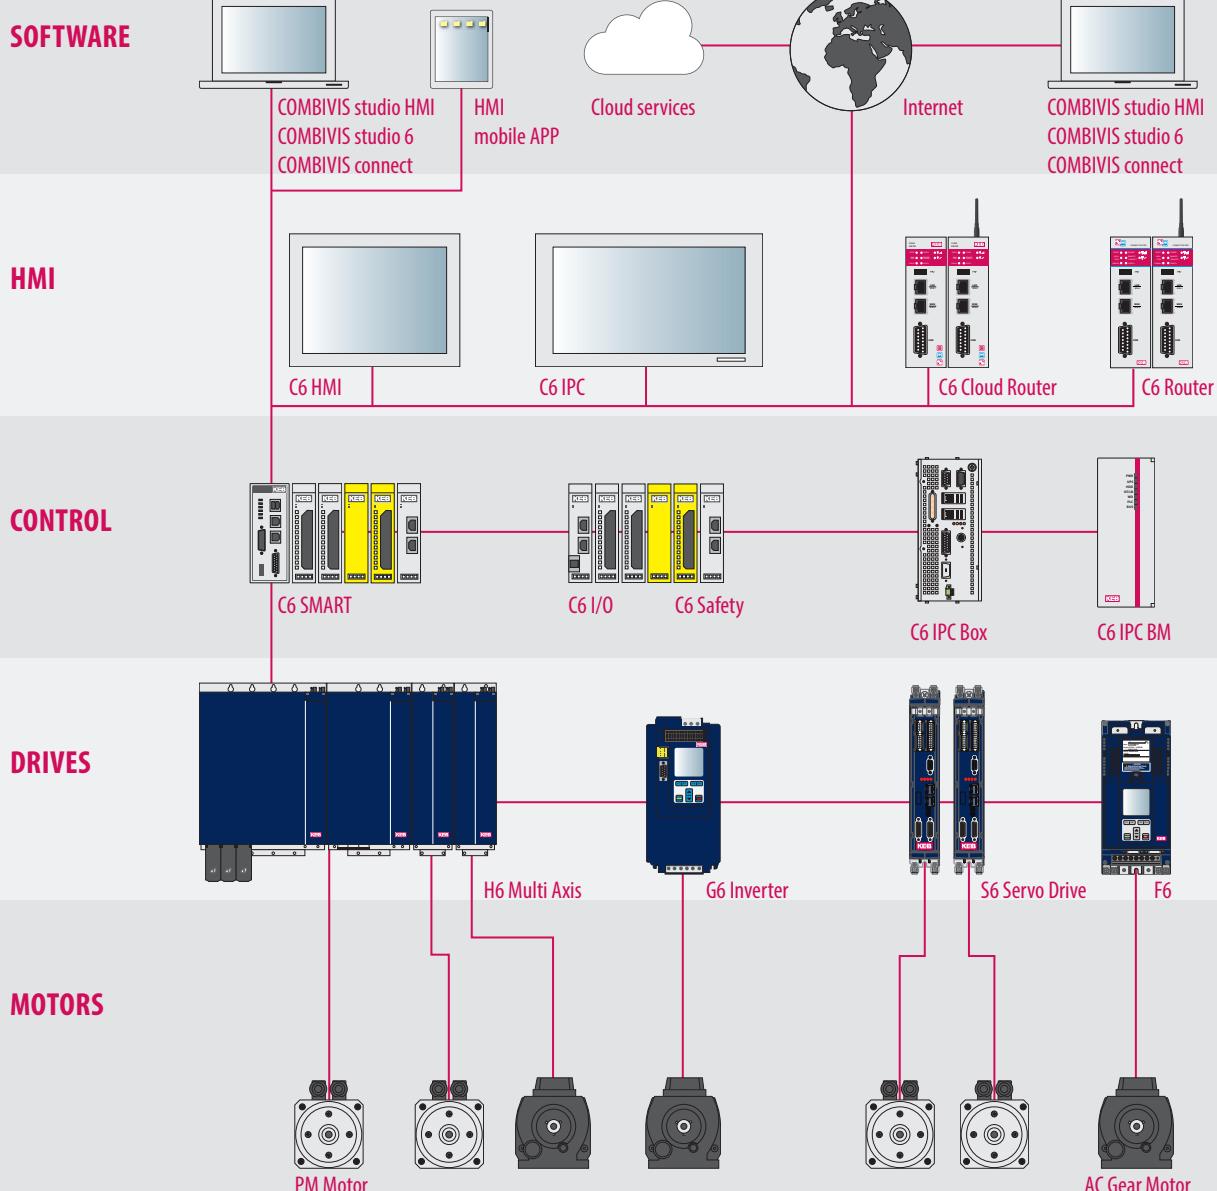

Automation with Drive

Drive is movement, dynamics, precision, endurance, continuity and much more.

Whether managing formulations, an optimized operator interface or the controlled movement of axes – it all requires a clear overview combined with logic and is based essentially on the selection of the right technology.

The integrated KEB system offers the best basis for high performance and economics in the application as well as excellent efficiency in the practical implementation.

KEB provides the right solutions!

SERVO MOTORS IN THE COMPLETE SYSTEM

OPTIMALLY COORDINATED FEATURES – THE KEY TO SUCCESS

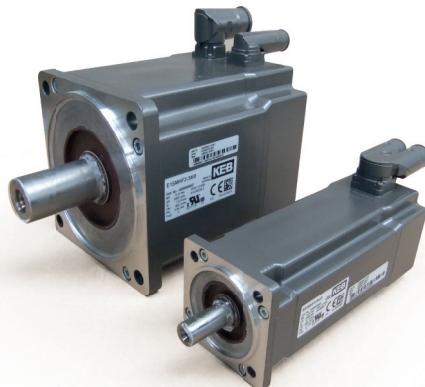

From the user interface to the rotating movement – it is our goal to make sure: we provide all the tasks you require from a single supplier. KEB drive controllers have proven themselves in the market for many years. Now we have expanded our range to provide an all-in-one package. The core control function is provided with IPC based control technology, along with software tools, a flexible range for visualisation, and remote maintenance.

Optimum rotating movement is provided by the servo motors, which are available in three series, each with specific benefits. With energy efficiency ratings significantly above IE4 (three-phase asynchronous motors) there is a strong argument in favour of synchronous drive systems. Real time process control is also possible in combination with the COMBIVERT Drive Controller.

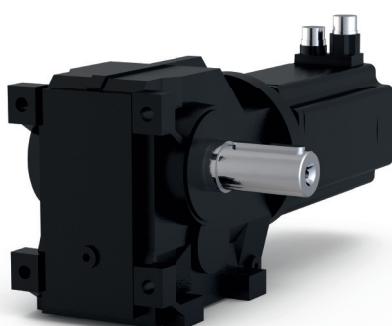

The package is complimented with pre-fabricated motor and encoder cables. This allows easy installation, fast start-up and safe operation. Select the right motor for your optimum drive solution from a portfolio that is tailored to meet your specific requirements.

DYNAMIC LINE DL3 *economical, durable, powerful*

Stall torque in Nm

DYNAMIC LINE DL3

With seven physical design sizes and three alternative lengths, this new series covers application areas from the infeed axis to the main drive.

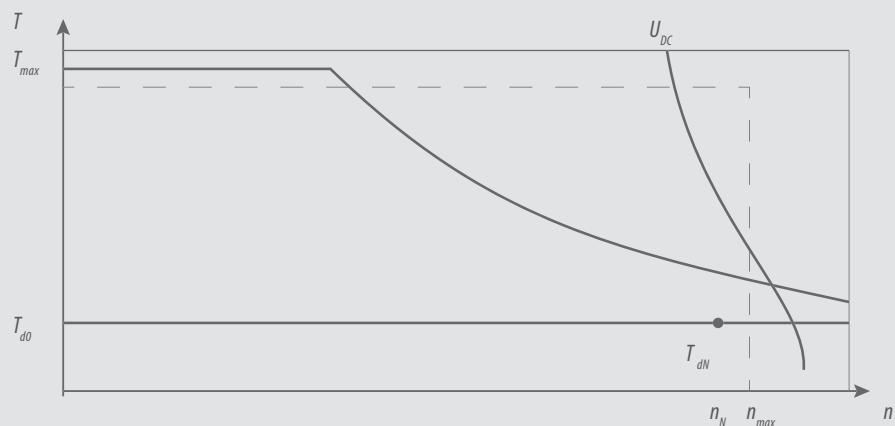

A high degree of density gives excellent peak torques in compact dimensions, whilst built-in modularity offers a flexible solution for the widest verity of tasks. The broad speed range provides the basis for minimal variation and universal use.

Dynamic Line DL 3 series motors create an excellent base for high-performance machines and systems, capable of handling dynamic applications and high loads.

THE PERFECT CONNECTION

PLANETARY GEARS SGPP BUNDLED WITH DYNAMIC LINE DL3:

- Low backlash
- High torque
- High efficiency (97%)
- Ratio i=5 up to 40
- Low noise
- Lifetime lubrication
- **Option:** surface protection STEEL IT

INDUSTRY SEGMENTS

- Machine tools
- Metal forming
- Packaging technology
- Food technology
- Wood working systems
- General automation devices

APPLICATION EXAMPLES

- Revolving tables
- Tool changer
- Roboter and handling devices
- Linear positioning
- Conveyor drives
- Winder

Stall torque in Nm

DYNAMIC LINE 2

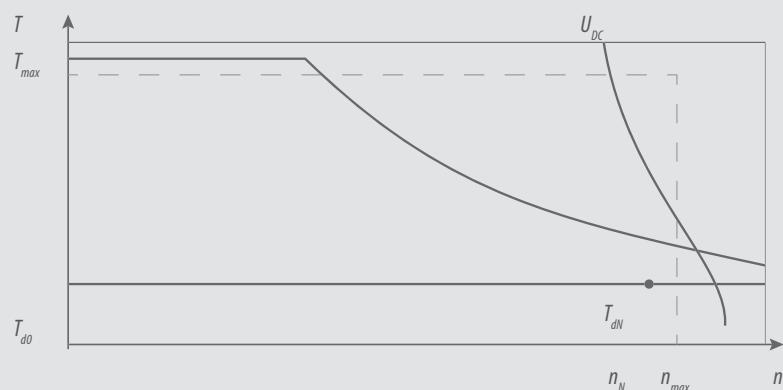

This series offers the latest motor technology in five physical design sizes. They have been configured for tasks with a high system resolution, short designs and small build volumes, and are particularly suitable for difficult mechanical conditions such as vibration, installation, location or temperature.

With pre-fabricated cables and an electronic name plate (BISS) the start-up process and potential for error during installation is minimized. The result is a high degree of availability and maximum serviceability.

Stall torque in Nm

TA SERIES

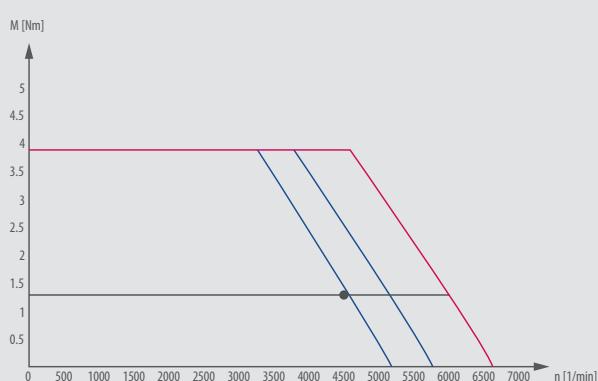

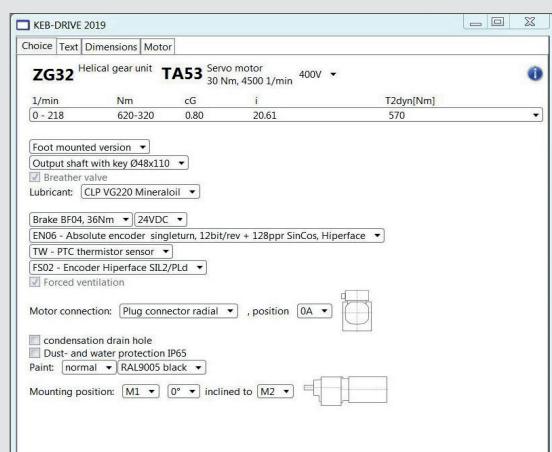

Servo technology in combination with an industrial gear box module gives rise to a variety of servo geared motor types:
 Spur, shaft-mounted helical, helical worm, helical bevel and planetary gear.

The direct input into the gearbox reduces the work that would otherwise be required with a conventional connection coupler, increasing efficiency and service life in a particularly compact design.

As a flexible solution from the gearbox module, the servo gear motor offers high overall efficiency and excellent dynamics, as well as reduced backlash option (on request). The series TA offers properties such as lifetime lubrication, universal installation positions and robust mechanics.

KEB DRIVE

is our perfect software tool for geared motor selections, based on a combination of continuous torque and peak current dependent on the nominal torque. It also provides technical data sheets, 2D and 3D engineering files as well as the ability to allocate a matching controller.
