

KEB

BRAKES & CLUTCHES

COMBIBOX

EN

The KEB logo is displayed in white, bold, sans-serif capital letters on a red rectangular background. The background of the entire page is a low-angle, upward-looking photograph of a complex industrial machine with numerous polished metal pipes, railings, and structural beams, set against a clear blue sky.

KEB AUTOMATION KG

All our efforts are directed towards the development, production and application of electromagnetic technology throughout our extensive range of brakes and clutches.

The functions, **starting, stopping, positioning and safe holding** of moving axes in machines and plant call for reliably designed and safely functioning components.

With our advanced manufacturing techniques we are able to produce high quality, high-grade products, and through our continued investment we now have manufacturing plants worldwide. We have the ability to produce high volume stock parts or ones that are tailored specifically to your requirements.

COMBIBOX PROJECT SOLUTIONS

READY FOR INSTALLATION

Compact COMBIBOX with customized housing and sprockets for cycled machine processes.

KEB double clutch for engaging and disengaging the motor together with secondary attachments.

Ready installed KEB COMBIBOX for clutching and breaking a pulley.

The COMBIBOX is a ready to install electromagnetic actuated clutch-brake module in a single housing.

The modular system is designed for a multitude of variants; these covering most of the applications in the field.

The patented adjustment procedure permits an air gap readjustment in it's installed condition. Thus giving a greater lifetime of the wear affected components.

The units designed for Start-Stop-operation considerably reduce the energy consumption due to a continuously running drive.

TYPE 10

has an energise to engage single sided brake, this is the most commonly used, permitting high switching frequency and good positioning accuracy. The COMBITRON rapid switch can be used with this variant to achieve expectionally high switching frequencies. The rated torque of both clutch and brake are identical.

TYPE 09

is the COMBIBOX version without brake, i.e. an electrical clutch in a housing for the use between e.g. motor and gear unit.

TYPE 06

has an energise to disengage permanent magnet single-side brake. The characteristic of this variant is that the position of the output shaft is kept safe and backlash-free in currentless condition. The rated torque of the brake is slightly lower than that of the clutch.

	11	100	300	80	260				

$J^{1)}$	= moment of inertia	[kgm ²]	t_1	= Engaging time, time until 0.9 T_{2N} is reached	[ms]
$T_{2N}^{2)}$	= rated torque after running in process	[Nm]	t_{11}	= Engaging delay time, time until the armature is attracted	[ms]
P_R	= permissible friction per second	[J/s]	t_2	= Release time, time until the armature is attracted to the opposing side.	[ms]
P_{20}	= power input at 20 °C	[W]			
W_R	= friction	[J]			
$W_{R0.1}$	= friction work until an abrasion of 0,1 mm is reached	[J]			
X	= rated air gap	[mm]			
X_n	= clearance at which a readjustment is recommende	[mm]			

- Sum of the moment of inertia reduced to the speed of the COMBIBOX plus the moment of inertia of the COMBIBOX parts to be accelerated or decelerated (J).
- The rated torques listed are safely attained after a run-in phase at 100 rpm. In new condition and for substantially higher speeds the torques are possibly lower.

POWER SUPPLY

COMBIBOX requires d.c. voltage for actuation. The rated voltage of the magnets is 24 V DC standard. For operation with rectifiers the magnets are available in other voltages on specification. The permanent-magnet brake installed in type 06 requires a smoothed supply voltage. To ensure a safe function in case of large temperature fluctuations, we recommend the supply of the coil with constant current.
